

# SQL Server 2005 Designing a Database Server Infrastructure

## MCITP 70-443 Exam Preparation

Database • Durasi: **5 Hari** • Course Code: **DB-1206**

### Deskripsi

Training ini merupakan jalur lanjutan bagi siapa saja yang ingin menguasai teknologi Microsoft SQL Server. Materi training disusun untuk melengkapi persyaratan program sertifikasi internasional MCITP track 70-443.

### Tujuan Training

Peserta dapat mendefinisikan high-availability solutions, melakukan automating administrative tasks, mendefinisikan security solutions, memantau dan men-troubleshoot database server, mendesain dan mengeksekusi deployment, mendefinisikan berbagai infrastruktur (seperti storage, hardware, dan jumlah server dan instance).

### Prasyarat

- ▶ Familiar dengan teknologi database Microsoft SQL Server.
- ▶ Disarankan telah mengikuti training DB-1205: SQL Server Database Implementation and Maintenance.

### Target Peserta

Database Administrator ; Database Developer ; Business Intelligence Developers.

### Tinjauan Materi

- ▶ Planning a Database Server Infrastructure.
- ▶ Deploying and Consolidating Multiple Instances.
- ▶ Designing SQL Server Security in The Enterprise.
- ▶ Designing Database Server Security Policies.
- ▶ Designing SQL Server Endpoints.
- ▶ Designing Database Security.
- ▶ Planning for High Availability in The Enterprise.
- ▶ Failover Clustering.
- ▶ Database Mirroring.
- ▶ Log Shipping.
- ▶ Replication.
- ▶ Designing the Physical Database.
- ▶ Designing a Data Recovery Strategy.
- ▶ Archiving Database Data.

### Training Lanjutan yang Disarankan

- ▶ DB-1207: SQL Server Optimizing and Maintaining Database Administration Solution
